Students:

Galit Abramov 307865766, Matan Benishty 307902619, Hadar Cochavi 204719843, Michael Afonin 310514997, Oron Trabelsi 204180491.

Final assignment – Programming in Linux Environment.

Instructions:

- 1. 1. At first, for compiling, building and running the program, use the command-
 - 'sudo ./Install.sh'
- 2. Then, the server is ready to get requests. You can create user, upload and download files. You can use the synopsis of client.sh script by the following command: "./client.sh -h" or "./client.sh --help"

How to use client:

```
Create user –
```

sudo ./client -a -u <username>

upload file -

sudo ./client -s -u <username> -f <filename>

Download file -

sudo ./client -r -u <username> -f <filename> -o <path>

Parameters:

- -a, -add
- -u, --user
- -f, --file
- -s, --send
- -o, --output
- -h, --help
- -r, --receive
